

HD Aluminum Hydraulic Jack 200 Ton

The days of calling a welder to location to cut valve seats out of your fluid ends are finally over.

Acumen now offers the strongest and lightest hydraulic jack in the oilfield. 200-Ton capacity at 10,000 PSI operating pressure and still only 45 lbs. in weight. Along with our self-retracting piston, stroke limit valve, our HEAVY DUTY (HD) aluminum hydraulic jack allows for safe lifting practices when the job needs to be done fast.

HD Jack has a full 1" stroke to ensure valve seat is fully extracted from the seat deck on the first try, every time. Our patent pending stroke limit valve is utilized to avoid over travel on piston while operating and maintaining full pressure.

Proven, Trusted, and Guaranteed success when combined with our HD Quick Release Valve Seat Puller.

Replacement seal kit available

FEATURES AND BENEFITS

- Single acting cylinder
- Capacity range up to 200 ton
- Designed for 10,000 psi operating pressure
- Plug & play with Acumen HD QRVSP & conventional valve seat pulling tools

SAFETY

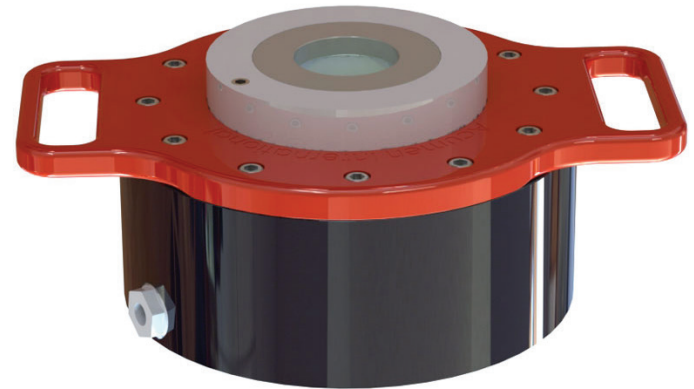

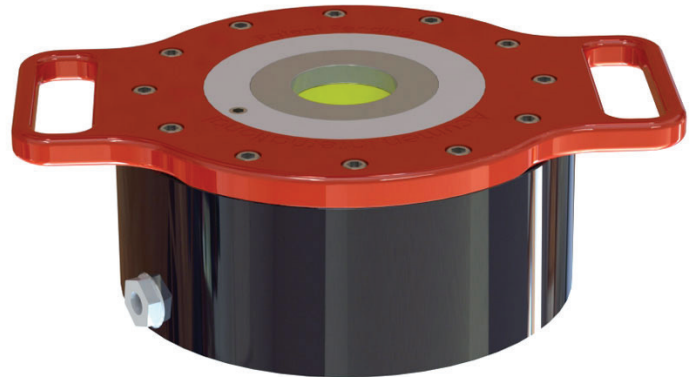

- Piston blow-out protection
- 30% less weight than conventional steel jacks
- Ergonomic handles integrated into top cover system

EFFICIENCY

- Full 1" piston stroke
- Automatic piston retraction
- Light weight allows rapid movement from one seat to the next

DURABILITY

- Element resistant Seals
- Load tested at 125% pf nominal capacity
- Hard-anodized coating protects against wear and

Patent Pending
